

IGS Samsung LED Troffer Lights for New Construction and Remodel

Specifications

The IGS Samsung LED Troffer Series is the most efficient line of LED Troffer Lights available today. The combination of the high output, long lasting Samsung Chipset, IGS SoftPush™ Driver Technology and the smooth and even light distribution of this panel light series make it the obvious choice for any remodel or new construction project.

The series is dimmable and customizable, allowing you to choose your color temperature. The series is also compatible with the IGS CSLS Control System.
